Rabindra Jaiswal

Senior Solution Architect | Databricks | Apache Spark | Data & AI Platforms | Lakehouse Architecture| DecisionTree Analytics ex-Wipro Technologies| Ex-TCS | Ex- IBM | NIT-Durgapur'2012
Email – **rabinjais7@gmail.com** | Mobile – **8860004396** | LinkedIn - **https://www.linkedin.com/in/rabinjais7/**

SUMMARY

Senior Solution Architect with 14+ years of experience designing, building and optimizing enterprise data platforms and large-scale data engineering solutions using Databricks, Apache Spark, Microsoft Fabric, Snowflake and cloud platforms. Strong hands-on expertise in PySpark, SQL, Python, Spark performance optimization, Delta Lake, Lakehouse architecture, data migration and production CI/CD. Experienced in leading complex data platform implementations, troubleshooting production workloads, designing scalable architectures and enabling engineering teams through reusable frameworks and best practices.

CORE SKILLS:

DATABRICKS & LAKEHOUSE	**Databricks**, Apache Spark, PySpark, Delta Lake, Lakehouse Architecture, Spark Performance Tuning, Structured Streaming
DATA ENGINEERING	Python, SQL, Scala, Kafka, Snowflake, dbt, Apache Iceberg, Data Quality, Data Migration
Data Visualizations	Power Bi (advanced). Looker studio, superset
Programming Languages	**Python**, Scala, Java, Git bash, **SQL (Advanced)**
Cloud Platforms	Microsoft Azure (azure databricks, synapse analytics, stream analytics, azure data factory, azure functions), AWS (Glue, Athena, EMR lambda), Google cloud platform (big query, data proc, data flow, pub/sub)
Orchestrations	Dagster, Airflow(cloud composer), Azure Data factory, logic apps
PLATFORM & DEVOPS	Git, GitHub Actions, Azure DevOps, Jenkins, CI/CD

List of Certifications and achievements- https://www.credential.net/profile/rabindrajaiswal925832/wallet

- Databricks solution architect Champion,
- Databricks certified data engineer professional
- Databricks certified data engineer associate
- Snowflake core and snowflake Advanced
- Advanced certifications across Azure, AWS and Google Cloud..

EMPLOYMENT

Senior solution architect, DecisionTree Analytics| Springline, Savant, NICE **Gurgaon, Aug'25 - Current**

- Architect and optimize large-scale Databricks and PySpark workloads for production data engineering use cases, applying partitioning, file compaction, Delta optimization and query execution tuning to reduce processing time from 9 minutes to under 55 seconds.
- Led deployment and CI/CD automation framework for data pipelines using Git, GitHub Actions, and environment-driven release strategies across development, UAT, and production environments.
- Designing and governing robust Lakehouse architectures, including Delta optimization strategies such as Z-Ordering, statistics computation, schema management, and performance tuning for large-scale analytical workloads.
- Providing technical leadership for complex troubleshooting across SQL databases, lakehouses, metadata inconsistencies, and pipeline failures, ensuring faster resolution and stable downstream data consumption.
- Design data governance patterns using Unity Catalog, including catalog/schema organization, access control, data discovery, lineage and centralized governance across data assets.

Lead Data Engineer and solution architect, WIPRO Limited | For client – UHG **Greater Noida, Dec'23 – Aug'25**

- Migrated hundreds of MS SQL server databases and tables to azure cloud to build scalable and robust data warehouse of 12+ data sources of insurance related claims and eligibility data using snowflake, dbt with python and sql models in azure platform and improved the performance of complicated queries by 30%
- Built a monitoring dashboard using **Databricks Spark Streaming**, **Airflow**, and **Python**, enabling uninterrupted insights into streaming pipeline performance and operational KPIs.
- Designed, architected and built data quality application leveraging Python, Poetry, SQL, Snowflake, and Great Expectations (GX), automating hundreds of data validation tests and ensuring high reliability and integrity in a centralized data warehouse

Lead Data Engineer, TCS, Noida | For client – Nielsen Media **Noida, Sep' 22 to Dec'23**

- Tailored and crafted a reporting application for a leading Media analytics Organisation integrating data from **10+** data sources using Spark with Scala, AWS Data Lake, Jupyter Lab, airflow providing them a mature reporting solution. Optimized the processing of different data pipeline by **30%** by utilizing different optimization techniques.
- Developed a configurable data ingestion framework to process structured and unstructured streaming events (JSON, Avro, ORC) using **Apache Kafka** and **AWS Glue**.
- built and tested activities of **5+ ETL data pipelines** using CI/CD framework provided by Git lab

Senior Data Engineer, IBM, Noida Client – Deutsche Bank **Noida, Feb'17 to Aug' 22**

- Spearheaded a One Stop data ingestion framework facilitating data ingestion and processing of **10+** data source types including SQL database Oracle Database, flat files (JSON, excel, csv), Parquet, Avro, ORC using Spark and Scala, python, airflow
- Crafted and migrated an incremental data ingestion and extraction solution from on-prem to AWS cloud using custom python framework and saving client costs by **10%**

Data Engineer, IBM, Gurgaon | Client – Citi bank **Gurgaon, Jul '12 to Feb '17**

- **Constructed a Data warehouse** for one of the leading investment banks to handle approx. **100 GB** of customer, employee, subsidiaries, truncation details data using **Ab initio and its graphs**

- Accelerated Ab initio performance through techniques (lookup, In-Memory Joins, Data Parallelism, and rollups) to speed up various Ab Initio Graphs by **20%**
- Engineered phasing and checkpoint approach in **100+** abinitio graphs (ETL Mappings) to prevent data loss and to maintain uninterrupted data flow against process failures.

Education **Durgapur, May' 08 to Jul'2012**

B.Tech in Computer Science & Engineering – NATIONAL INSTITUTE OF TECHNOLOGY, DURGAPUR, CGPA- 7.21
